

NDI

National Datacomputer, Inc.

THE ADVANTAGE YOU'VE BEEN MISSING

Takes the accumulated monetary value of inventories.
Takes basic item inventories.

ICAL 100R

- Take better, lower cost inventory audits. ■ Stop theft by knowing more about it.
- Increase the profitability of the company.

If you're taking inventory with standard calculators and pencil & paper spreadsheets, then you owe it to yourself to try ICAL 100R.

ICAL decreases errors, time, personnel required, and operating costs in counting and managing inventories.

Here's an example of ICAL 100R's contribution in a large and growing market.

A BETTER WAY TO STOP THEFT

Today, top Convenience Store Chains and Inventory Service Companies are getting further down the road to stopping theft than ever before. That's because they've found a way to look far deeper for it.

Looking deeper didn't mean they had to change the way they took inventory. They simply did more of what they were already doing. Divided the store into far more categories, often 75-100 separate departments. Counted by more

individual rows, more brands; by coolers, gondolas, and displays. That made all the difference. Counting more departments gave them the knowledge they'd been missing of what was stolen, and where theft occurred. Let them do more about it - ALL OF IT, whether it involved employees, shoplifters, or vendors.

DOING MORE TO STOP THEFT DOESN'T HAVE TO COST MORE. ICAL 100R HELPS YOU LOWER THE AMOUNT YOU NOW SPEND PER INVENTORY AUDIT.

It's possible to count 75-100 separate departments with a single-total calculator, but you'd take far too long and spend more time than you need to. ICAL lets you take an accurate 128-department inventory in one smooth trip through the store...most likely in less time than you now require.

You get the information you need without driving costs out of sight.

IT'S THE PROFESSIONAL'S CHOICE.

ICAL 100R is based on feedback from inventory professionals at all levels of responsibility. Today, it's relied on by 9 out of 10 Inventory service Companies and Convenience Store firms from the largest chains to the best single store outfits.

Over 50,000 ICAL's are now in service, most on a day in day out basis.

IT DOESN'T STOP MANAGERS FROM MANAGING.

Before ICAL, field inventory audit managers and security departments had to work around their calculators' limitations, either spending too much to get the job done, or trading off critical information in order to keep field audit time within reason. Calculators not designed for the job just can't match ICAL.

ICAL LETS YOU TAKE INVENTORY IN ONE SMOOTH TRIP THROUGH THE STORE, WITH NO LENGTHY DEPARTMENTAL TOTTALLING REQUIRED.

ICAL lets you divide the store into as many as 128 separate departmental totals, while standard calculators let you count one total at a time. ICAL lets you enter dollars into the correct department as you encounter each item with each total instantly available...as you count the last item or at any point along the way.

ICAL LOWERS INVENTORY TIME WHILE IT GIVES YOU MORE INFORMATION THAN YOU PRESENTLY GET.

After familiarization, actual counting time can

come down to:

1 Hour, for a 1000 Square Foot Convenience Store

2.5 Hours for a 2250 square Foot Convenience Store

4 Hours for a 3500 square Foot Convenience Store

These times are reported by those actually using ICAL.

JUST ONE PERSON REQUIRED, NO NEED FOR TWO-PERSON TEAMS

No two-person teams of callers and counters required. ICAL lets you count and enter at the same time. Touch keying lets you keep your eyes on the stock while counting.

YOU GET ACCURACY AS WELL AS SPEED. ICAL'S MISTAKE ALARM HELPS END ENTRY ERRORS.

AUDIBLE ALARMS

ICAL beeps to indicate you've made a mistake. Hit two keys together, or hit the keys out of sequence, and ICAL beeps. ICAL also beeps to indicate an entry over \$100. An auditor learns to

listen for the beep as an accuracy check while he or she focuses attention on the stock.

VISUAL ALARMS

An "ERROR" reading on your digital display indicates an error condition exists.

YOU GET A KEYBOARD DESIGNED FOR HIGHER SPEED AND FEWER MISTAKES.

- Big Keys equal High Speed

Keying: up to 6000 Keystrokes per hour:

- A key arrangement designed to stop most repeated mistakes. A minus key that's out of the way. "Equals" and the multiplication "x" key at different sides of the board. The most used key "0" is full width to allow easy access.

ICAL IS EASY TO USE.

No special training is required. Just start using it. That's important where high employee turnover is a fact of life. If you can operate a standard calculator, you can operate ICAL.

SELF TESTS FOR ACCURATE INVENTORIES.

ICAL's self-test capability makes sure your inventory gets off to the right start.

THE RUGGEDEST CALCULATOR ON THE MARKET.

ICAL's keyboard and ABS Plastic case are built to take it, day after day.

LONG BATTERY LIFE, MINIMAL BATTERY COST

Up to 400 hours on two commonly available alkaline 9V

batteries. A "low battery" message (LO BAT) appears in the display when 4-6 hours of battery life remain. Won't lose memory as long as one battery is connected.

HIGHLY MOBILE, GOES WHERE YOU NEED TO GO.

At thirty ounces, ICAL goes to the top shelves, into the cooler, over boxes in the back room and outside too. Cuts fatigue caused by heavier units...especially office calculators mounted on wheeled carts.

LET'S YOU KEEP ONE HAND FREE WHILE COUNTING TO INCREASE SPEED.

ICAL's optional waistmount helps auditors key and move stock at the same time.

A CALCULATOR THAT STANDS UP TO TEMPERATURE EXTREMES.

Operates in cold and hot temperatures.

ICAL's LCD digital readout operates down to -4 degrees C with no degradation in performance. Goes from an overnight stay in the car to instant use.

A CALCULATOR THAT DOESN'T FORGET.

Dropping ICAL won't cause memory loss. And, you won't accidentally turn it off either...requires a deliberate keying sequence to switch off.

ADDITIONAL INFORMATION

Display	8 Digit LCD
Dimensions	2 5/8"H x 4 3/4"W x 12"L
Weight	Under 30 ounces
Options	Waistmount. Let's one hand key, leaving the other free to move stock.

HAVEN'T YOU MANAGED WITHOUT ICAL LONG ENOUGH?
